✉ [yangrq.lambda@gmail.com](mailto:yangrq.lambda@gmail.com)  [github.com/waterlens](https://github.com/waterlens)

## RESEARCH INTERESTS

By studying how compiler technology can shape the features of programming languages, I aim to contribute to the development of new programming languages that offer strong static guarantees, intuitive error handling, and seamless cross-platform portability.

## EDUCATION

<b>Hong Kong University of Science &amp; Technology</b>	<b>Sept. 2023 - Aug. 2025 (expected)</b>
<b>M. Phil.</b> in <i>Computer Science and Engineering</i> . Supervised by Lionel Parreaux.	<i>Hong Kong S.A.R., China</i>
<b>Zhejiang University</b>	<b>Sept. 2019 - June 2023</b>
<b>B. Eng.</b> in <i>Computer Science and Technology</i> . GPA: 3.84/4.0	<i>Hangzhou, China</i>

## PROJECTS

<b>MLScript</b> 	<b>Autumn 2023 - Now</b>
<ul style="list-style-type: none"><li>This is an ongoing project in HKUST TACO Lab.</li><li>Designed an ANF-based IR with join points support and integrated it into MLsript compiler.</li><li>Implemented a code rewriter that contains a non-duplicate partial inliner leveraging function splitting.</li><li>Implemented a C++ backend. Using a universal object representation, and reference counting for memory management.</li></ul>	

<b>Calocom</b> 	<b>Spring 2022</b>
<ul style="list-style-type: none"><li>A coursework for the course <i>Compilation Principle</i>.</li><li>Designed and implemented a programming language with functional features like algebraic data type, closure, and pattern matching.</li><li>Topics include type checking, closure conversion, LLVM-based code generation</li></ul>	

<b>SyOC</b> 	<b>Spring 2022 - Summer 2022</b>
<ul style="list-style-type: none"><li>This is a compiler for SysY (a subset of C) language.</li><li>Typical dataflow analysis: immediate dominator analysis, iterated domination frontier analysis for SSA construction.</li><li>Constant propagation, CFG simplification, and dead code elimination.</li></ul>	

<b>MMM</b>	<b>Autumn 2024 - Now</b>
<ul style="list-style-type: none"><li>A small compiler for the functional MiniMoonBit language.</li><li>Do selective CPS transformation and thunking on function calls to avoid stack overflow in the JavaScript backend.</li><li>Implemented an efficient native backend with tree-pattern covering instruction selector and chordal graph coloring register allocator.</li><li>Lambda lifting, loop invariant code motion, local value numbering, and guaranteed tail recursion elimination.</li></ul>

<b>Smart Inlining through Function Splitting, <i>PLDI SRC 2025</i></b>	<b>April 2025</b>
--	-------------------

## EXPERIENCE

<b>Intern for Programming Language Tool Development, at <i>IDEA</i></b>	<b>Mar. 2025 - June 2025 (expected)</b>
<b>Student Volunteer, <i>ICFP 2024</i></b>	<b>Sept. 2024</b>
<b>Teaching Assistant, <i>Programming with C++</i></b>	<b>Jan. 2024 - June 2024</b>
<b>Remote Research Intern, hosted by <i>Yizhou Zhang</i></b>	<b>Sept. 2022 - Jan. 2023</b>
<b>Undergraduate Teaching Assistant, <i>Principles of Programming Languages</i></b>	<b>Sept. 2022 - Jan. 2023</b>

## SKILLS

**Programming Languages:** OCaml, Rust, C/C++, Scala, Java, Python, etc.  
**Proof Assistant:** Coq
